INFOOTSINGU VÕIMALUSED GOOGLE SCHOLARIS

I Infopäring võtmesõna(de)ga. Fraasiotsing: kui lisada 2 või enamast sõnast koosnevale väljendile jutumärgid, otsitakse ainult neid viiteid, kus sõnad asuvad täpselt samas järjestuses – täpsemad ja asjakohased tulemused. Ilma jutumärkideta lisatakse sõnade vahele vaikimisi operaator AND, st, et leitavates viidetes asuvad küll kõik sõnad, kuid need ei pruugi olla kõrvuti – tulemusi on rohkem, kuid kõik pole täpselt asjakohased.

Abstract

The rise of cognitive warfare has reshaped modern conflict by positioning the human mind as a key battleground. This paper presents a detailed framework for understanding cognitive warfare, distinguishing it from related concepts, including information and psychological warfare. We emphasised the use of advanced technologies, such as AI and neuroscience, to target perception, decision-making, and social cohesion as key methods in executing cognitive warfare. The primary objective of the research was to investigate
